

Sydney Spring User Group

Come join us at our August 2006 meeting,
featuring Spring 2 namespaces, SOA and JBI!

Tonight's Featured Topics

First up we review Spring 2 Namespaces, which is a hot new feature in Spring 2. Instead of being limited to `<bean>` definitions, Spring 2 now supports extensible XML schemas to build configuration directives. Not only are these directives used throughout Spring in areas such as JNDI and AOP, but you can also build customised directives specific to your own problem domain. Tonight we'll examine step-by-step how you can do just that.

We also will be enjoying a session on Services Oriented Architecture (SOA). Some of you may be aware of a recent report questioning J2EE relevance in an SOA world. Tonight we'll explore exactly what is SOA (and JBI), how Spring makes it simpler to engineer such applications, and review key considerations. A large, real-world, Spring-based project successfully using these technologies will also be discussed.

Agenda

Monday, 7 August 2006

- 6:00 pm: Arrival and refreshments
- 6:30 pm: Welcome
Jayant Joshi from Iris Interactive
- 6:40 pm: Spring 2 namespaces
Ben Alex from Interface21
- 7:25 pm: Tea and coffee break
- 7:40 pm: SOA and JBI
Ramon Buckland from Infocomp
- 8:25 pm: General discussion
Jayant Joshi from Iris Interactive
- 8:30 pm: Evening concludes

Location

Cliftons
200 George Street
Sydney NSW 2000

Entry is free, and complimentary refreshments will be served. There is also a lucky door prize! You don't need to be a member to attend.

RSVP Details

Places are limited. Please RSVP by emailing spring-users@iris.com.au before 5 pm Friday, 4 August 2006.
